---

## SPHINX IMAGE HANDLING

---

CHAPTER  
THREE

---

**IMAGE INCLUDING SOURCE IN SUBDIR**

---

CHAPTER  
**FOUR**

---

## **INCLUDING IN SUBDIR**

```
print("line 1")
```

```
print("line 2")
```

Absolute /img.png download.

This is an include file.

---

**CHAPTER  
FIVE**

---

## **TESTING DOWNLOADABLE FILES**

Download img.png here. Download this there. Don't download this.

---

CHAPTER  
SIX

---

## TEST FILE AND LITERAL INCLUSION

```
# Literally included file using Python highlighting
# -*- coding: utf-8 -*-

foo = "Including Unicode characters: üöä"

class Foo:
    pass

class Bar:
    def baz():
```

```
pass
```

```
def bar(): pass
```

Encoding ‘utf-8-sig’ used for reading included file u’/Users/tkomiya/work/sphinx/tests/build/root/wrongenc.inc’ seems to be wrong, try giving an :encoding: option

```
This file is encoded in latin-1 but at first read as utf-8.
```

```
Max Strauß aß in München eine Leberkässemmel.
```

This file is encoded in latin-1 but at first read as utf-8.

Max Strauß aß in München eine Leberkässemmel.

**CHAPTER  
EIGHT**

---

## **DOCUTILS INCLUDE WITH “LITERAL”**

While not recommended, it should work (and leave quotes alone).

```
Testing "quotes" in literal 'included' text.
```

## TESTING VARIOUS MARKUP

### 9.1 Meta markup

*Section author:* Georg Brandl

*Module author:* Georg Brandl

#### TOC

- *Testing various markup*
  - *Meta markup*
  - *Generic reST*
    - \* *Body directives*
    - \* *Admonitions*
  - *Inline markup*
  - *With*
  - *Tables*
  - *Figures*
  - *Version markup*
  - *Code blocks*
  - *Misc stuff*
  - *Index markup*
  - *Ö... Some strange characters*
  - *Only directive*
  - *Any role*

### 9.2 Generic reST

A global substitution (the definition is in `rst_epilog`).

```
some code
```

Option list:

<b>-h</b>	help
<b>--help</b>	also help

Line block:

```
line1
    line2
        line3
            line4
        line5
line6
    line7
```

### 9.2.1 Body directives

#### Title

Topic body.

#### Sidebar

##### Sidebar subtitle

Sidebar body.

#### Test rubric

Epigraph title

Epigraph body.

—Author

Highlights

Highlights body.

Pull-quote

Pull quote body.

a

b

with some *markup* inside

## 9.2.2 Admonitions

---

### My Admonition

Admonition text.

---

---

**Note:** Note text.

---

**Warning:** Warning text.

---

---

**Tip:** Tip text.

---

Indirect hyperlink targets

## 9.3 Inline markup

### *Generic inline markup*

Adding n to test unescaping.

- **command\n**
- *dfn\n*
- *guilabel with accelerator and \n*
- *kbd\n*
- *mailheader\n*
- **makevar\n**
- *manpage\n*
- *mimetype\n*
- *newsgroup\n*
- **program\n**
- *regexp\n*
- *File → Close\n*
- *File → Print*
- *a/varpart/b\n*
- *print i\n*

### *Linking inline markup*

- **PEP 8**
- **Python Enhancement Proposal #8**

- **RFC 1**
- **Request for Comments #1**
- *HOME*
- *with*
- *try statement*
- *Admonitions*
- *here*
- *there*
- *My caption of the figure*
- *My caption of the figure*
- *my table*
- *my table*
- *my ruby code*
- *my ruby code*
- Fig. ??
- Fig. ??
- Table ??
- Table ??
- Listing ??
- Listing ??
- *Including in subdir*
- :download: is tested in includes.txt
- *Python -c option*
- This used to crash: &option

Test ABBR (abbreviation) and another ABBR.

Testing the index role, also available with explicit title.

## 9.4 With

(Empty section.)

## 9.5 Tables

Table 9.1: my table

1	<ul style="list-style-type: none"> <li>• Block elems</li> <li>• In table</li> </ul>	x
2	Empty cells:	

Table

9.2:  
empty  
cell    in  
table  
header

1	2
3	4

Tables with multirow and multicol:

1	test!		c
2	col	col	
y	multi-column cell		

x
1

## 9.6 Figures

Fig. 9.1: My caption of the figure  
My description paragraph of the figure.  
Description paragraph is wrapped with legend node.

Fig.  
9.2:  
figure  
with  
align  
op-  
tion

## 9.7 Version markup

New in version 0.6: Some funny **stuff**.

Changed in version 0.6: Even more funny stuff.

Deprecated since version 0.6: Boring stuff.

New in version 1.2: First paragraph of versionadded.

Changed in version 1.2: First paragraph of version-  
changed.

Second paragraph of versionchanged.

Fig. 9.3: figure with align & figwidth option

## 9.8 Code blocks

Listing 9.1: my ruby code

```
1 def ruby?
 2   false
3 end
```

```
import sys
sys.stdout.write('hello world!\n')
```

## 9.9 Misc stuff

Stuff <sup>1</sup>

Reference lookup: *[Ref1]* (defined in another file). Reference lookup underscore: *[Ref\_1]*

See also:

something, something else, something more

---

<sup>1</sup> Like footnotes.

**Google** For everything.

- This
- is
- a horizontal
- list
- with several
- items

### Side note

This is a side note.

This tests role names in uppercase.

LICENSE AGREEMENT

Terry Pratchett, Tolkien, Monty Python.

**ähnlich** Dinge

**boson** Particle with integer spin.

**fermion** Particle with half-integer spin.

**tauon**

**myon**

**electron** Examples for fermions.

**über** Gewisse

```
try_stmt ::= try1_stmt | try2_stmt
try1_stmt ::= "try" ":" suite
             ("except" [expression [",," target]] ":" suite) +
             ["else" ":" suite]
             ["finally" ":" suite]
try2_stmt ::= "try" ":" suite
             "finally" ":" suite
```

## 9.10 Index markup

Invalid index markup...

Main

## 9.11 Ö... Some strange characters

Testing öäü...

## 9.12 Only directive

In LaTeX.

In both.

## 9.13 Any role

Test referencing to *headings* and *objects*. Also *modules* and *classes*.

More domains:

- *JS*
- *C*
- *myobj* (user markup)
- *n::Array*
- *perl -c*

## TESTING OBJECT DESCRIPTIONS

```
func_without_module(a, b, *c[, d])
    Does something.

func_without_body()

func_with_unknown_field()
::

: empty field name:
    Field_name
    Field_name all lower
    FIELD_NAME
    FIELD_NAME ALL CAPS
    Field_Name
    Field_Name All Word Caps
    Field_name
    Field_name First word cap
    FILEd_name
    FIELD_name PARTial caps

func_noindex()

foolib.func_with_module()

Referring to func with no index. Referring to nothing.

mod.func_in_module()

class mod.Cls

    meth1()
    static meths()
    attr

Cls.meth2()

exception errmod.Error(arg1, arg2)

mod.var
```

```
func_without_module2() → annotation
long(parameter,    list)
another one

class TimeInt
    Has only one parameter (triggers special behavior...)

    Parameters moo (Moo) – Moo
```

```
class Time(hour, minute, isdst)
```

#### Parameters

- **year** (TimeInt) – The year.
- **minute** (TimeInt) – The minute.
- **isdst** – whether it's DST
- **hour** (*DuplicateType*) – Some parameter
- **hour** – Duplicate param. Should not lead to crashes.
- **extcls** (Cls) – A class from another module.

**Returns** a new *Time* instance

**Return type** *Time*

**Raises** **ValueError** – if the values are out of range

#### Variables

- **hour** (*int*) – like *hour*
- **minute** (*int*) – like *minute*

---

CHAPTER  
**ELEVEN**

---

**C ITEMS**

```
Sphinx_DoSomething()  
SphinxStruct.member  
SPHINX_USE_PYTHON  
SphinxType  
sphinx_global
```

---

CHAPTER  
TWELVE

---

## JAVASCRIPT ITEMS

```
foo ()  
bar  
bar.baz (href, callback[, errback])
```

**Arguments**

- **href** (*string*) – The location of the resource.
- **callback** – Get's called with the data returned by the resource.

**Throws** `InvalidHref` – If the *href* is invalid.

**Returns** *undefined*

```
bar.spam
```

---

CHAPTER  
**THIRTEEN**

---

## REFERENCES

Referencing `mod.Cls` or `mod.Cls` should be the same.

With target: `Sphinx_DoSomething()` (parentheses are handled), `SphinxStruct.member`, `SPHINX_USE_PYTHON`, `SphinxType *` (pointer is handled), `sphinx_global`.

Without target: `CFunction().malloc()`.

```
foo() foo()  
bar bar.baz() bar.baz() baz()  
bar.baz
```

---

CHAPTER  
**FOURTEEN**

---

**OTHERS**

**HOME**

**-c** command

**-c**

**+p**

**arg**

Link to *perl +p* and *arg*

**commit**

**-p**

Link to *hg commit* and *git commit -p*.

---

CHAPTER  
**FIFTEEN**

---

## **USER MARKUP**

**myobj** (*parameter*)

Description of userdesc.

Referencing *myobj*.

---

CHAPTER  
**SIXTEEN**

---

**CPP DOMAIN**

```
class n : Array
{
    T &operator[] (unsigned j)
    const T &operator[] (unsigned j) const
```

---

CHAPTER  
**SEVENTEEN**

---

**FILE WITH UTF-8 BOM**

This file has a UTF-8 “BOM”.

---

CHAPTER  
**EIGHTEEN**

---

**TEST MATH EXTENSIONS**  $E = MC^2$

This is inline math:  $a^2 + b^2 = c^2$ .

$$a^2 + b^2 = c^2$$

$$a + 1 < b$$

$$e^{i\pi} = 1 \tag{18.1}$$

$$e^{ix} = \cos x + i \sin x$$

$$n \in \mathbb{N}$$

a + 1 < b Referencing equation (??).

## AUTODOC TESTS

Just testing a few autodoc possibilities...

### 19.1 Sphinx test suite utilities

**copyright** Copyright 2007-2016 by the Sphinx team, see AUTHORS.

**license** BSD, see LICENSE for details.

### 19.2 test\_autodoc

Test the autodoc extension. This tests mainly the Documenters; the auto directives are tested in a test source file translated by test\_build.

**copyright** Copyright 2007-2016 by the Sphinx team, see AUTHORS.

**license** BSD, see LICENSE for details.

**class** test\_autodoc.**Class** (*arg*)

Class to document.

**attr** = ‘bar’

should be documented – süß

**descr**

Descriptor instance docstring.

**docattr** = ‘baz’

should likewise be documented – süß

**excludemeth** ()

Method that should be excluded.

**inst\_attr\_comment** = None

a documented instance attribute

**inst\_attr\_inline** = None

an inline documented instance attr

**inst\_attr\_string** = None

a documented instance attribute

**mdocattr** = <StringIO.StringIO instance>

should be documented as well - süß

```
meth()
Function.

classmethod moore(a, e, f) → happiness

prop
Property.

skipmeth()
Method that should be skipped.

udocattr = 'quux'
should be documented as well - süß

test_autodoc.function(foo, *args, **kwds)
Return spam.

class test_autodoc.Class(arg)
Class to document.

Additional content.

attr = 'bar'
should be documented – süß

descr
Descriptor instance docstring.

docattr = 'baz'
should likewise be documented – süß

excludemeth()
Method that should be excluded.

inheritedmeth()
Inherited function.

inst_attr_comment = None
a documented instance attribute

inst_attr_inline = None
an inline documented instance attr

inst_attr_string = None
a documented instance attribute

mdocattr = <StringIO.StringIO instance>
should be documented as well - süß

meth()
Function.

classmethod moore(a, e, f) → happiness

prop
Property.

skipmeth()
Method that should be skipped.

udocattr = 'quux'
should be documented as well - süß

class test_autodoc.Outer
Foo
```

---

```

class Inner
    Foo

    meth()
        Foo

Class.docattr = 'baz'
    should likewise be documented – süß

exception test_autodoc.CustomEx
    My custom exception.

    f()
        Exception method.

class test_autodoc.CustomDict
    Bases: dict

    Docstring.

class autodoc_fodder.MarkupError

```

---

**Note:** This is a docstring with a

Explicit markup ends without a blank line; unexpected unindent.  
small markup error which should have correct location information.

```

class test_autodoc.InstAttCls
    Class with documented class and instance attributes.

    All members (5 total)

    ca1 = 'a'
        Doc comment for class attribute InstAttCls.ca1. It can have multiple lines.

    ca2 = 'b'
        Doc comment for InstAttCls.ca2. One line only.

    ca3 = 'c'
        Docstring for class attribute InstAttCls.ca3.

    ia1 = None
        Doc comment for instance attribute InstAttCls.ia1

    ia2 = None
        Docstring for instance attribute InstAttCls.ia2.

class test_autodoc.InstAttCls
    Class with documented class and instance attributes.

    Specific members (2 total)

    ca1 = 'a'
        Doc comment for class attribute InstAttCls.ca1. It can have multiple lines.

    ia1 = None
        Doc comment for instance attribute InstAttCls.ia1

```

## Dedication

For Docutils users & co-developers.

## Abstract

This document is a demonstration of the reStructuredText markup language, containing examples of all basic reStructuredText constructs and many advanced constructs.
